1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Clarke et al 5,877,798. Clark discloses in column 6 line 60- column 7 line 5, a scanner in a housing with a scanning device, i.e. rotating mirror 116. Also disclosed are a pre-scan assembly including light source 110, lens 112 and pre-scan mirror 114, and a post-scan assembly including a post-scan fold mirror 120, a “start of scan” mirror 122 and a sensor 124. (It is noted that applicant recites the “end-of-scan location” in independent claim 1. However, in broad interpretation, the examiner can rightfully interpret “end-of-scan” location and “start-of-scan” location to be co-located.)

3. Claims 2-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 12-21 are allowable over the prior art of record.

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach or fairly suggest to one of ordinary skill in the art at the time of the invention, the second element for directing the beam toward the sensor to sense the beam at the end-of-scan location along the scan path as in claim 2, or the second pre-scan assembly and second sensor for detecting a third or fourth light beam at an end-of-scan location along a scan path as in claim 12.
